

# STUDIO™

- Addressed an issue when having an apostrophe in the STUDIO Q&A welcome message where it was causing a display issue of the media panel when on a mobile device.
- As part of ongoing optimizations, the workspace panel activity tracking has been removed from the platform.
- Updated the presentation change log activity report to include the telephony number being used within a telephony source.
- Updated the process when going from live to simulative and back to live to prevent a muted audio filter from carrying over.
- Addressed an issue with the text in the chapters panel where it was not wrapping properly, where words were being split instead of wrapping.
- Updated the player controls when in the full screen mode to hide the controls after 3 seconds.
- Addressed an issue within the Compositor Tool where newly added overlays were not being added to the top of the list.
- Addressed an issue where the “Target Video Bitrate” error message was being duplicated within the Settings tab of the presenter console.
- Addressed an issue when copying a simulative webcast with auto-start enabled where a false error message was displaying in the webcast notifications.
- Updated the STUDIO Q&A so unanswered questions will not show in the attendee view for a moderator.
- Addressed an issue when sharing the login page via social share where the ShowKey parameter was being randomized on the login page link causing an error to display.
- Addressed an issue with the STUDIO Q&A panel, where when using the “Moderator names only” display, the names were not displaying.
- Addressed an issue within the Q&A staffer view, where If you had the "Unassigned" filter enabled and you selected the "Reset" button, the filter for "Unassigned" did not reset to disabled.

- Addressed an issue when copying a webcast with edited media versions where it was causing a white screen to appear during the screen share playback.
- Addressed an issue where the editor waveform was not matching the audio playback.
- Addressed an issue where the Q&A welcome message was disappearing after a few seconds on the attendee view.
- Addressed an issue where the Q&A panel was not functioning if the welcome message contained double quotes.

## WEBCASTING™

- Addressed an issue where the schedule report delivery feature was not functioning properly in the Webcasting reporting portal.
- Addressed an issue with the two-factor authorization email editor, where certain html was being removed from the editor.
- Addressed an issue in the Webcasting reporting portal where if a survey response had a comma the response was not being exported properly into a CSV report.
- Updated the maximum CPE duration requirement to be 999 minutes. Previously the maximum was set to 100 minutes.
- Addressed an issue with copying a webcast where the date/time selection was not being updated properly.
- Addressed an issue when trying to update the date/time of a webcast where if the date is exactly or over a year ago from the current date, it was displaying an error message.
- Addressed an issue with the registration package configuration where if the availability range was left blank, the platform was auto-filling the availability with today's date.
- Updated the links section on the webcast listing page to include the second screen links.
- Updated the display of a custom report in the Webcast reporting portal to include the navigation settings on the report.
- Addressed an issue when switching a webcast from Live to Simulive within the Settings of Webcasting where the slides were not transitioning when the simulive media was played.

## VIDEO PORTALS™

- Addressed an issue where the program view count within the channel was displaying the incorrect count.
- Added the ability to add default image overrides for channels and programs.
- Addressed an issue with the “Add Reminder” button within the program lobby, where the calendar reminder was not displaying the program details.
- Addressed an issue where if a channel was set with security access rules, when trying to generate a webcast recording, the recorder was not finalizing the process.
- Addressed an issue where a channel admin did not have access to delete a series.
- Added the polling requirement completion feature to the CPE settings.
- Addressed an issue where the series title translations were not saving.
- Added the ability to configure the STUDIO Q&A panel from within the layout section of program wizard.

## ONLINE EVENTS™

- Updated the show mail process to no longer attach certificates to the in-show emails. Certificates will still be sent via the auto-forward setting that sends to the users’ external email address.
- Updated the messaging that appears when uploading a video collection to a sponsor space to remove the mention of “flv”.
- Addressed an issue when making changes to a presentation within the content structure section where “Unknown” was being displayed for the speaker.
- Addressed an issue with the deleting individual lines from a group chat.
- Updated the second screen view where if the webcast has a long title it will no longer be cutoff.

- Addressed an issue with user profile, where when hiding the “messages” section from display mode, it was still being seen from within the communication center.

## CROSS PLATFORM

- Added certification for Firefox 63
- Added certification for Chrome 71
- Addressed an issue with the marketing automation integrations where the field "Poll Response Count" calculation could be too high for multi-select responses.
- Addressed an issue with the course admin "recalculate completions" tool, where it was failing to award completion if a user's visit information did not match the on demand state of the webcast.
- Addressed an issue within the STUDIO Attendee Checkpoint report where it was excluding users who entered immediately after the webcast early entrance period opens.
