

# Studio

- Addressed an issue where the on-demand state and dates were not being reset when the webcast was run live until the webcast had been ended.
- Addressed a browser issue for Edge, where the video source was freezing when scrubbing in an on-demand webcast.
- Addressed an issue where the Monitor Tool was reporting incorrect counts after the webcast was started.
- Addressed an issue where old user connections were not being cleared out of the Monitor Tool when they were no longer connected to the webcast.
- Updated the advanced media editor with localization in all platform supported languages.
- The “Upstream Video Bitrate” has been updated so the bitrate value is automatically cleared out when the webcast is ended, and the limit had been imposed by the system. Any manually applied bit rate limit will not be cleared out when the webcast is ended.
- Updated the Korean and Japanese translations for "Resume" that appears when re-entering an on-demand webcast.
- Added a new global search function within the Monitor Tool, providing an easy way to search for connected users within the tool.
- Added the ability to have a static HLS manifest file. This provides tools like Roku and Ramp to always use the same manifest file and not rely on a dynamic one.
- Updated the simulive logic to when a simulive source is switched in and out of the scene, the cue points remain in sync regardless of the number of times the source is brought in and out of the scene.

## Studio Webcasting

- Updated the security around access to Portals to only give access if the administrator has the “Webcast Portal” admin right.
- Addressed an issue with allowing XSS script into a polling slide title. This is now being blocked.
- Added a new field value to the “Survey Responders” report that will display responses from registered users who did not attend the webcast.
- Updated the Q&A Studio report with a stock column for folder name, providing insight into what question the folder was assigned to.
- Addressed an issue within the “Registration Detail” and “Attended Viewer Detail” reports where the export function was not working.
- Addressed a browser issue where some of the reporting charts were not display in the IE 11 browser.
- Updated several translation strings within the webcasting setup interface.

## Video Portals

- Addressed an issue with a staffer trying to access a webcast with a staffer link that has no moderator rights and where that staffer didn’t have access to either the channel and/or the program.
- Added administrator change log activity within the Video Portal interface.
- Updated the program lobby page to display the message “There is currently no content available” within the browse section of the lobby if there is no content to display.

## Virtual Events

- Addressed an issue with embedding a video within the blog post editor.
- Added a maximum number of badges allowed to be setup within the event. The maximum is 50 badges.
- Added a maximum number of badge qualifications allowed per badge. The maximum is 5 badge qualifications per badge.
- Updated the registration payment and upgrade pages to be mobile responsive.

## Cross Platform

- Added certification for Firefox 65
- Added certification for Chrome 72
- Addressed an issue with the CPE admin tool not processing for some users when attempting to load in a list of over 1000 users.
- Retired the buddy list/connection feature from the platform.
- Optimized the User List report across the platform and improved processing by 25%.
- Updated all the branding and copyrights across the platform.
- Optimized the exit action options by removing Presentation Chat Room, Presentation Polling Question, Presentation, and Space as options.
- With Google retiring their Google+ product, we have removed Google+ as a social share option.

- Added error messages when trying to delete an event/webcast. This message will appear in Virtual Events and Studio Webcasting.
- Added a new field available to be passed to the Marketing Automation partners. The field is “ShowUserKey”.
- Added two new fields for Marketing Automation that can be passed. These fields are the questions and the answers of surveys and polls, based on their order.
- Addressed an issue with the registration setting for “On Successful Completion” where when enabling this option and then making edits within the registration page editor, the “On Successful Completion” setting was not being saved.
- Addressed an issue within the staffer rights where the right “Low Latency View (WebRTC) was not saving properly.
