Studio

- The Studio producer, monitor and advanced editor tools have been updated to open in a tab instead of a popup.

- Addressed an issue with the webcast auto-start, where at times if no staffers were logged into the console when the webcast was supposed auto-start, the webcast did not start.

- Updated the webcast media download expiration to 24 hours. Previously this was set to 10 hours.

- Addressed an issue with Kollective where the webcast did not finish playing the full media file.

- Addressed an issue with playing subtitles back on an Android 9 device.

- Disabled the "beep" from being played when attendees/speakers join an integrated conference bridge.

- Addressed an issue within the presenter console when switching the exit action target from "This Window" to "New Window".

- Addressed an issue when using the zoom feature within the advanced editor, the cue point line disappeared and re-appeared misaligned from where the mouse clicker was located.

- Addressed an issue in the Producer Tool where when removing an input from a scene, it was still getting displayed within the Scene Designer.

- Updated the monitor tool to display the Amplify description vs. the DNS name of that Amplify server.

- Addressed an issue when changing a webcast from audio-only to audio/video where it was causing some staffers to be logged out of the presenter console.

- Addressed an issue where the chat auto opt-in for staffers using a "Viewer" role was occurring before the page finished loading, which made the group chat not functional.

- Added an error message and prevented redial when attempting to make a call with a number that doesn't exist.

- Addressed an issue within Q&A where a question was disappearing from the attendee view after changing the priority of a published question.

- Added tracking in the Monitor Tool for eCDN specific errors on a user's connection.

- Addressed an issue in the advanced editor where an overlapping screenshare error message was displaying inadvertently.

- Addressed an issue within the CPE setup screen where an error was displaying when trying to save the page.

- Updated the notifications section to display that a PowerPoint is being uploaded when the upload was initiated from the presenter console.

- Addressed an issue when copying the Integration Telephony details, where the word "reservation" was misspelled.

- Updated the webcast copy process to copy over the distribution email filters.

- Added checkbox to "Copy CPE Courses" in Create New Event > Copy an existing event menu.

- Addressed an issue within the Universal Host Space where the hove text for a hot spot was appearing off to the right of the button.

- Updated the navigation toolbar so the drop-down labels wrap to a second line if needed.

- Updated the toolbar in responsive layouts so the search icon is visible against light and dark colors.

- Removed the private chat indicator within the booth rep portal.

- Update the presentation list within the Content Structure section to use a scrollable list.

- Updated the Virtual Events listing page so the search field is now "sticky" and by default the events list will sort by latest date/time. Previously it sorted alphabetically.

- Removed the "Tenant Library" option from the add new Host Space section.

Cross Platform

- Added certification for Firefox 70

- Added certification for Chrome 78

- Added a new merge variable to the email parse variable list for displaying the date in the DDMMYYYY format. $[WCStartDateDDMMYYYY]$ is the new variable.

- Added the ability customize the GDPR message without having to use the custom country list.

- Addressed an issue with the course admin page where it was showing the polls pushed during rehearsal mode if they exceeded the number pushed during the live webcast.

- Addressed an issue with events enabled with SAML/ADFS, where if a user accessed the registration page and the event was open, they were brought directly into the event after registering and not forced to the SAML/ADFS authentication page.

- Addressed an issue with Marketo mapping fields where the last field was being omitted from the mappable fields in the setup within Platform Builder.

- Addressed an issue with Eloqua transfers where the transfer flags were inadvertently set to 0.

- Addressed an issue with the system generated calendar reminders not display double byte characters.

- Addressed an issue with users having duplicate registrations when using two-factor registration.

- Upgraded the security on user and administrator passwords from SHA-1 to SHA-2.

- Upgraded the security on reset passwords and replaced the plain text temporary passwords with a password reset link.

- Added a new parameter on the User API for setting user's "mail auto-forwarding" setting.

- Added a new operation in the UDF API for returning all UDF values for the following sources:
    - Exhibitor
    - Booth
    - Show
    - Event/Webcast

- Updated the Amplify label in the Monitor Tool to use the description field instead of the DNS name for each Amplify server.

- Addressed an issue when using the standard thank you page with paid registration, where an error was displaying after submitting the page.

- Updated the registration page settings to display when the webcast/event is live.

- Updated the Quick Reg pages to fail validation if the GDPR checkbox is visible and not clicked.

- Updated all the branding images within the platform to replace "West" with "Intrado".
