

# Studio

- Addressed an issue where the slides were not auto-progressing for the attendees who are viewing on the non-streaming view (i.e. listen only mode)
- Addressed an issue when recording the webcast media at 180p at 100 kbps it was displaying black after being edited.
- Updated the UI to the default introduction slide.
- Addressed an issue with the media file download so that only the screen share media will be download when requested. Previously, when requesting the screen share media, the entire webcast session was being downloaded.
- Addressed an issue with the webcast recorder, where it was timing out when the requested webcast was configured with many Amplify servers.
- Updated the Studio sources, so a screenshare cannot be added a source when the webcast is set to audio only.
- Addressed an issue where screen share was restarting for presenters during Simulive playback.

- Addressed an issue with the group chat and Q&A activity trend reports where the graphs were not populating even though there was data present.
- Addressed an issue with the graph in the Polling Questions report where only the last answer option displays in the graph.
- Addressed an issue with registration thank you page setup, where the custom thank you page url was not properly saving.

- Updated the Amplify server listing page to add a scroll bar when the list of servers is larger than the initial page view.
- Addressed an issue with the Report Builder, where the total views of a handout were not being calculated.
- Addressed an issue on Live Attendance Trend Graph, where the total viewer count was not displaying correctly.
- Updated the Registration 2.0 and Attendance 2.0 reports so the table sorting is by date, instead of alphanumerically.
- Addressed an issue with the affiliate data metrics in the Registration 2.0 report, where when drilling into attendee list for a specific affiliate data, it was displaying the total hits across all affiliates.
- Updated the “Total Unique Viewers” metric in the Attendance 2.0 report to no longer include staffers and to display both on demand and live unique viewers.
- Addressed an issue when adding two polling questions that both have apostrophe's, the first polling question's apostrophe was turning into quotations.
- Addressed an issue in the CPE Admin Tool, where when selecting a user's certificate to recalculate, it was updating all users who had completed the course to have their certificate regenerated.

- Addressed an issue in the Event Presentation Visits report where the duration was not being calculated properly for attendees accessing on a mobile device.

- Updated the video player used for Virtual Events to no longer allow the Chrome browser to download uploaded videos.
- Updated the audit check to include a notification when a Studio webcast is on demand and there is no on demand media set.

## Cross Platform

- Added certification for Firefox 73
- Added certification for Chrome 80
- Updated the maximum character limit for the CPE Course Title to 355 characters. Previously it was set to 80 characters.
- Added the media version to the “Presentation Summary Report”.
- Addressed an issue with the Event/Documents report where the prompt to select a document was only display documents associated to a space.
- Updated CPE certificate builder to support background PNG images.
- Addressed an issue in the CPE Admin Tool, where when selecting a user's certificate to recalculate, it was updating all users who had completed the course to have their certificate regenerated.
- Updated the registration payment to display a “processing” message after the attendee clicks submit on the page.
- Increased the character count allowed in the HTML Editor for messaging.
- Access to XPOCAST Prime was removed from the product.
