

# Studio

- Updated the storage location for uploaded media files in Studio to no longer reside in the CMS. For media files that were uploaded prior to this release, there will be a toggle that allows you to view previous uploaded files.

- Updated the webcast embed feature for the Chrome browser to launch the webcast into a new window. Chrome recently made a change and now blocks the display of 3<sup>rd</sup> party cookies.

- Addressed an issue with the Trivia game not loading due to a large character count across all the question and answers.
- Updated the resume creation feature to only allow for an upload a resume. Users will no longer be able to manually enter their resume text.
- Addressed an issue with the badge requirement for taking “any” event survey, where the badge qualification was being awarded regardless if the user completed the survey.
- Addressed an issue in the admin portal section “content structure” where in the presentation list, the presentation mode was displaying incorrectly.
- Addressed an issue with copying a presentation with media and slides in VE, where it was returning an error after executed the copy.
- Addressed an issue with the marquee message in booth builder where the background color was not updating.

- Addressed an issue with sponsor users not being able to add a new job posting to a sponsor space within the Virtual Event.

## Cross Platform

- Added certification for Firefox 81
- Added certification for Chrome 85
- Addressed an issue where adding html into a user bio was returning an error.
- Addressed an issue with the certificate merge variables, where if the same variable was used across multiple tenants it was causing a display issue with the variable.
- Updated the external APIs that allow for retrieving event survey activity to provide a date/time parameter in order to filter the results.
- Addressed an issue with the default two-factor confirmation email where it contained invalid html.
- Addressed an issue with the Activity Digest email returning an error when launching the calendar reminder.
- Addressed an issue in the mass user upload tool where the two-factor confirmation email was not triggering after completing the upload.
