Virtual Events

New Features

Matchmaking and Scheduling Meetings

Initial integration phase, Powered by Grip

For more information on when Matchmaking will be available for upcoming events, please contact your account representative.

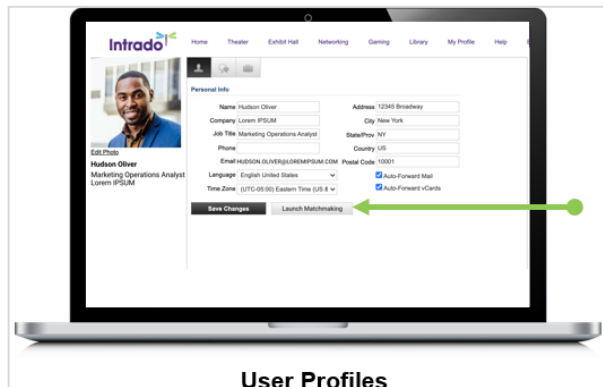

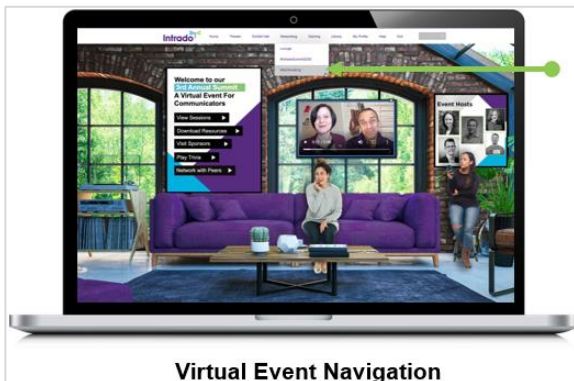

Within Virtual Events, attendees and exhibitors all have the ability to connect with each other and schedule individual video meetings through AI-driven Matchmaking recommendations.

Matchmaking provides attendees, exhibitors, and sponsors with highly targeted recommendations to connect with and meet other people who are aligned with their professional goals and interests.

Access from Virtual Environment

By selecting Matchmaking from the top navigation or within the profile view, each user's personal Matchmaking dashboard will open in a new tab/window.

Prior to, and during, the live virtual event date(s), event participants can log in to update their profile details, access Matchmaking recommendations, proactively request meetings, and manage their meeting schedule.

Recommendations, Interests, & Connections

Participants interact with a personalized home feed of recommended matches. Accept, decline, or anonymously skip recommendations and requests, and manage meetings with other attendees, exhibitors and sponsors.

AI technology uses Machine Learning, and as users add areas of interests to their profile and interact with their Matchmaking home feed & recommendations, the AI will learn from their preferences to generate even more accurate suggestions.

Exhibitor Teams

To maximize meeting opportunities and cross-lead sharing, exhibitor team members can access a shared interface during the event. This Teams interface allows collaboration on items such as:

- Share a meeting calendar with teammates to schedule and manage meetings with recommended connections
- Manage inbound leads as a sales funnel
- Schedule meetings on behalf of your teammates
- Export a connections list to import in external CRM
- Viewing Exhibitor-wide meetings via a Calendar or List view, and filter by team member or status

Data Insights

The Meeting Performance Insights showcase metrics and stats for all scheduled and conducted meetings

Updates

Speaker Setup

Within the presentation edit screen of Virtual Events, administrators can now launch into a speaker's profile to update their information. Previously, administrators had to go into the Users section, search for the user to update their profile.

Messaging – Pending Registrations

Within the messaging section, a new merge variable has been added that will allow administrators to send an email to all pending registrants and include a link specific to each individual user so they can confirm their registration for the event. This is used for events that enable the two factor feature during the registration process.

Insert Merge Variable

Merge Variables

- CSS Path
- Image Path
- Script Path
- Sender Email Address
- Sender Reply To Address
- Server IP Address
- System Date
- System Date (MM/DD/YYYY)
- SystemTime

Special Functions

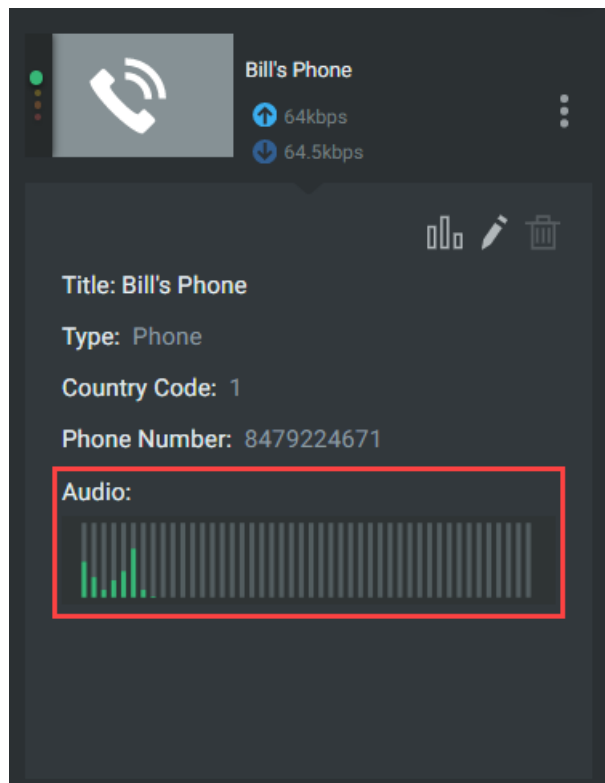

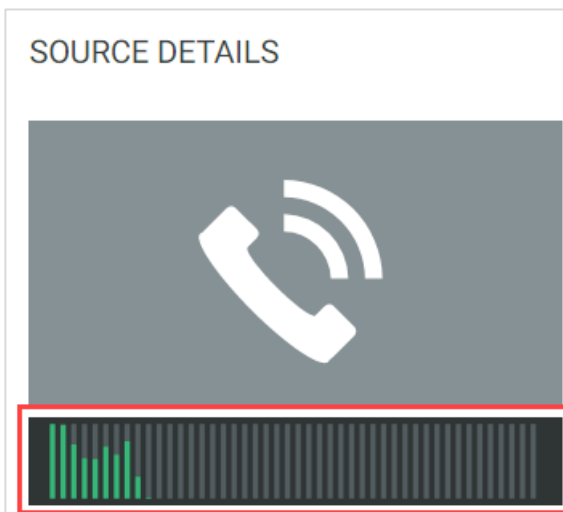

- Link To Publication Resource
- Merge External Content
- Registration Package Details
- Recipient Profile Edit
- TwoFactor Registration Authorization URL**

Studio

Updates

Audio Level Display

Within the presenter console, the source details on the console and in the monitor tool have been updated to display an audio level indicator. This will display for all live sources sending audio (webcam, phone, encoder)

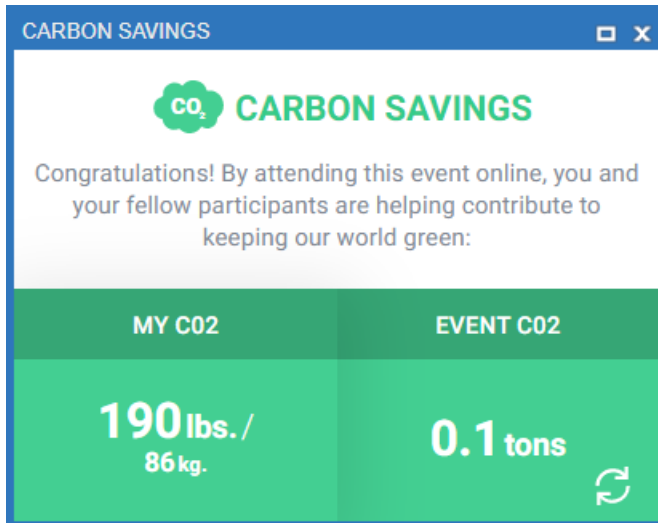

Cross Platform

Updates

Carbon Savings

The text within the carbon savings panel in Studio, Lobby Experience, and within Virtual Events has been updated to the below.

CPE Certificates

The CPE certificate was updated to include support for non-ascii characters.
