

Streaming Product Release Notes

Version 15.7

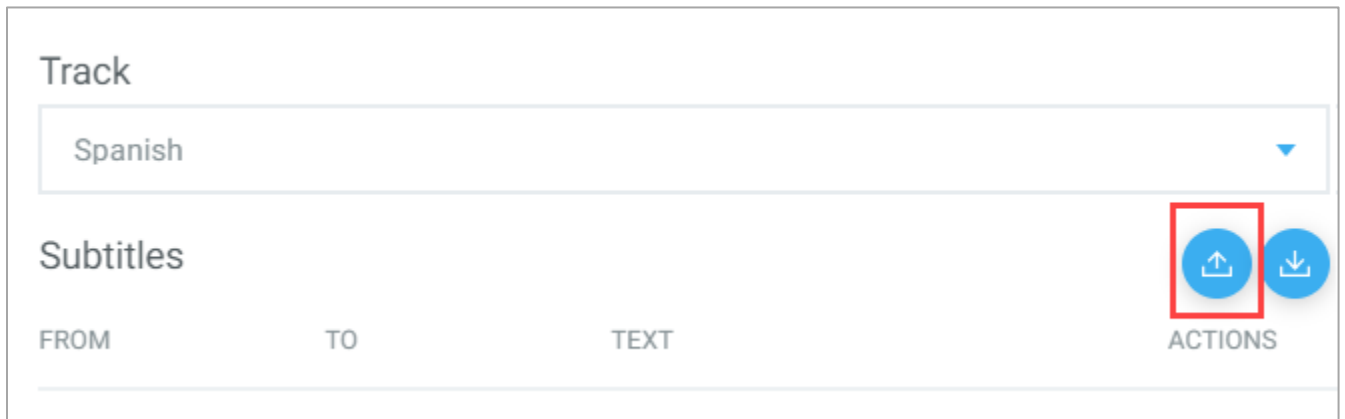

The scheduled release date is Saturday, September 24, 2022 for NA data center
The scheduled release date is Tuesday, September 27, 2022 for APAC cloud

This version of the Release Notes includes all items that have been deployed during this release cycle.

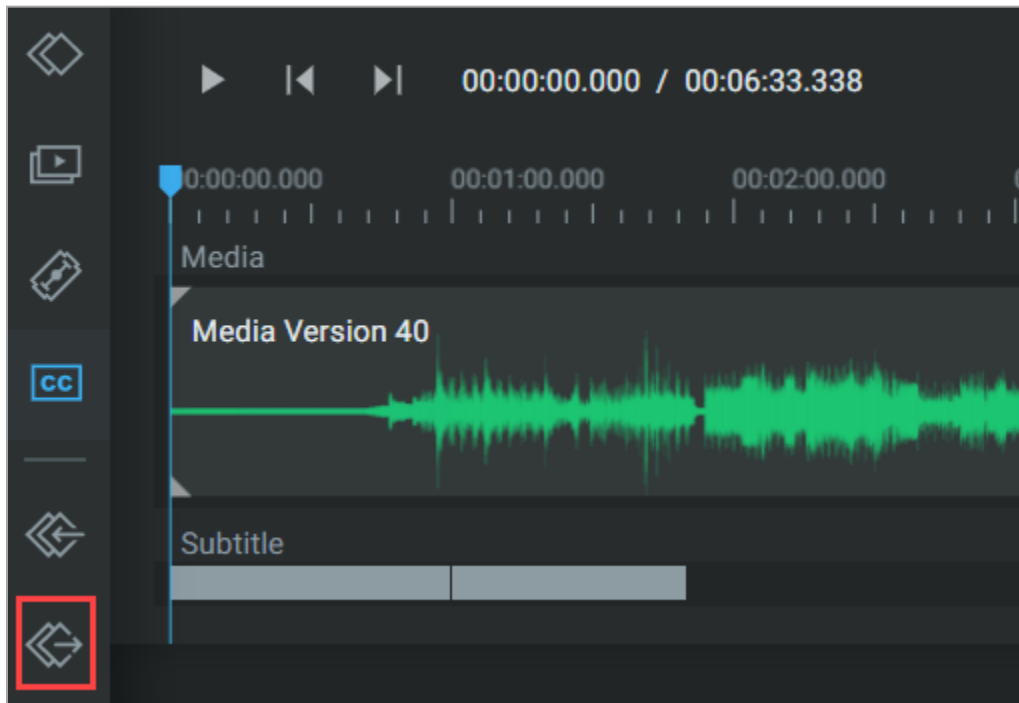

Studio

- Added an enhanced delivery for Studio live streams by utilizing blob storage. This feature is currently only enabled for internal Notified webcasts but will be turned on for clients soon.
- Within the basic and advanced editors in the presenter console, an export option was added for subtitles. If the existing media versions have subtitles uploaded, they can now be exported into srt format.

Basic Editor

Advanced Editor

- The Hive integration was updated to pass additional metrics over to the Hive reporting. The presentation title and external ID of a user are now passed over to Hive.
- Addressed an issue with uploaded video sources in the presenter console where if the video file had an audio sample rate other than 441k it would skew the countdown timer for the video source.
- Addressed an issue with the Adobe Acrobat Chrome browser extension where it was blocking the ability to view PDFs that were uploaded as a handout in Studio.
- Addressed an issue with the QoE dashboard where eCDN data was no longer displaying.”
- Addressed an issue with video slides where if there was a video slide set as the welcome slide and set to loop, any other video slide was also looping even though it was not set to loop.
- Addressed an issue when adjusting the playback speed for an on demand Studio webcast where the exit action was inadvertently being triggered.

Studio

You can find the technical requirements for the Studio platform by clicking on the below link. **These requirements will be updated on 09/24/22.**
